About Me

I am an experienced back-end developer with skills in Python, Django, Git, Windows PowerShell, and Kali Linux terminals. I have worked as a Telegram bot developer and designer at Euro Asia Project, contributing to the supervision and design of bots. Currently, I am employed as a web developer and designer at AlfaMax | collaborating on projects, including the creation of websites and Telegram bots.

I have created various useful Telegram bots such as Lotin Krill Bot and Chat GPT Telegram Bot. Lotin Krill Bot converts text from the Latin alphabet to the Cyrillic alphabet. Additionally, Chat GPT Telegram Bot facilitates text interpretation and simplifies chatbot creation. I have also developed a Wikipedia Telegram bot for quick information retrieval.

Beyond my proficiency in HTML/CSS, I am well-versed in using the Aiogram framework for Telegram bot development, Selenium for web automation, and Adobe Photoshop for design purposes. My approach to each project involves a combination of creativity and effective problem-solving.

I am highly motivated to explore new opportunities and engage in collaborative work.
